REGULAR AGENDA (continued)

15. PUBLIC COMMENT: THE PSB WILL PERMIT PUBLIC COMMENT ON SUBJECTS NOT ON THE AGENDA BUT MAY NOT DELIBERATE ON THESE ITEMS IF NOT POSTED FOR DISCUSSION. THE CHAIR MAY IMPOSE REASONABLE TIME LIMITS FOR EACH SPEAKER.

16. CONSIDERED AND APPROVED A CONSTRUCTION MANAGER AT-RISK CONSTRUCTION CONTRACT WITH PCL/SUNDT, A JOINT VENTURE, FOR THE HASKELL R. STREET WASTEWATER TREATMENT PLANT VARIOUS IMPROVEMENTS PROJECT AND ACCEPTED THE GUARANTEED MAXIMUM PRICE NUMBER 1 (GMP 1) IN THE AMOUNT OF \$4,708,868. IRAZEMA ROJAS, UTILITY CHIEF ENGINEERING OFFICER, 915-594-5562

Irazema Rojas, Utility Chief Engineering Officer, provided a presentation to the Board regarding this item (copy on file in Central Files.) The Haskell R. Street Wastewater Treatment Plant (Haskell) is a conventional activated sludge facility. It is rated to treat and discharge via two outfall locations to the Rio Grande up to 27.7 million gallons per day (MGD) of effluent on an annual average basis. The liquid treatment processes at Haskell include headworks (screening and grit removal), primary clarification, anoxic and aerated activated sludge basins, secondary clarification, tertiary effluent filtration, and disinfection using chlorine. The solids handling includes waste activated sludge (WAS) thickening using Dissolved Air Flotation Thickeners (DAFT), primary sludge and thickened WAS blending/storage tank, anaerobic digestion, and sludge dewatering using belt filter presses. Dewatered cake is hauled to a landfill for disposal. Now at over 100 years old, Haskell is in need of improvements to correct maintenance and operations issues being experienced. The Alfalfa lift station was built in 1966, rated to pump 4.3 MGD to the Bustamante Wastewater Treatment Plant (Bustamante). The sewer flows discharged by the refinery flows are included in the Alfalfa lift station service area. The improvements at the Alfalfa lift station will rehabilitate the lift station and install a new force main, via Tangier lift station, and as part of the Advanced Water Purification Facility project, these flows are being diverted from Bustamante to Haskell.

The project is being delivered using the Construction Manager At-Risk (CMAR) method. The complete CMAR project will be delivered in multiple Guaranteed Maximum Price (GMP) packages.

GMP1 will be for an early work package consisting of the procurement of long-lead time equipment for the Biological Odor Control System at the Headworks Building.

On a motion made by Mayor Leaser, seconded by Dr. Gitter, and unanimously carried, the Board considered and approved a Construction Manager At-Risk construction contract with PCL/Sundt, a joint venture, for the Haskell R. Street Wastewater Treatment Plant Various Improvements project and accept the Guaranteed Maximum Price Number 1 (GMP 1) in the amount of \$4,708,868. Mrs. Rojas answered questions from the board on this item.

17. CONSIDERED AND ADOPTED AN AMENDED AND RESTATED RESOLUTION FOR THE EMERGENCY FRONTERA FORCE MAIN PROJECT, FINDING THAT ADDITIONAL EMERGENCY CONTRACTS AND PURCHASES RELATED TO THE FRONTERA FORCE MAIN SYSTEM ARE NECESSARY TO PRESERVE OR PROTECT THE PUBLIC HEALTH OR SAFETY OF THE MUNICIPALITY'S RESIDENTS AND AUTHORIZED THE PRESIDENT/CEO OR DESIGNEE TO CONTINUE TO CONTRACT AND PURCHASE WITHOUT FURTHER ACTION OF THE PUBLIC SERVICE BOARD, PURSUANT TO ALLOWABLE EXEMPTIONS TO THE BID STATUTE UNDER SECTION 252.022(A) OF THE TEXAS LOCAL GOVERNMENT CODE TO CONTINUE TO ADDRESS THE URGENT PUBLIC NECESSITY.

Gilbert Trejo, Vice President of Operations and Technical Services, provided a presentation to the Board regarding this item (copy on file in Central Files.) The Frontera wastewater system is critical to the operation of EPWater as it conveys the wastewater flow from the entire westside community of El Paso for treatment at the John T. Hickerson Water Reclamation Facility (Hickerson Facility). The Frontera lift station pumps a total of 10 million gallons per day of wastewater to the Hickerson Facility through the two - 3.5 miles force mains with pipe diameters ranging from 30, 36, and 42-inch.

In 2020 and 2021, the pressurized force mains experienced multiple failures leading to ruptures that discharged untreated wastewater onto the area of Sunland Park between IH-10 and Doniphan and Rio Grande River.

The emergency repairs of the Frontera wastewater systems consist of the replacement of the dual force mains and repairs of the lift station. These repairs are being implemented through the delegated authority of the Public Service Board (PSB) in phases. Phase 1 and Phase 2 are complete, and approximately 12,100 feet of new 36-inch force main have been installed. Phase 3 consists of the installation of 3,600 feet of force main. Phase 3 is currently under construction and scheduled to be completed at the beginning of 2025. Phases 1-3 will complete a full run of one new force main from the Frontera lift station to the Hickerson Facility. There is a need for Phase 4 of the project to complete a redundant second line across the most developed highest risk area.

On a motion made by Mayor Leeser, seconded by Ms. Saenz, and unanimously carried, the Board, considered and adopted an Amended and Restated Resolution for the Emergency Frontera Force Main Project, finding that additional emergency contracts and purchases related to the Frontera Force Main system are necessary to preserve or protect the public health or safety of the municipality's residents and authorizing the President/CEO or designee to continue to contract and purchase without further action of the Public Service Board, pursuant to allowable exemptions to the bid statute under Section 252.022(a) of the Texas Local Government Code to continue to address the urgent public necessity. Mr. Trejo answered questions from the board on this item.

18. Consider and approve the 2025 Public Service Board meeting schedule.

On a motion made by Mayor Leeser, seconded by Dr. Ocaranza, and unanimously carried, the Board approved this item.
